SCPro™ certification is a rigorous, three-level certification process, which validates your knowledge of supply chain fundamentals, your ability to strategically assess business challenges and effectively implement supply chain improvements. This program is developed in the US by the Council of Supply Chain Management Professionals (CSCMP), one of the largest supply chain professional bodies in the world. The SCPro™ certification is conferred by CSCMP upon successfully passing the certification exam.

What is SCPro™?

SCPro™ certification is a rigorous, three-level certification process, which validates your knowledge of supply chain fundamentals, your ability to strategically assess business challenges and effectively implement supply chain improvements. This program is developed in the US by the Council of Supply Chain Management Professionals (CSCMP), one of the largest supply chain professional bodies in the world. The SCPro™ certification is conferred by CSCMP upon successfully passing the certification exam.

Why SCPro™ Certification?

The demand for experienced supply chain leaders with professional certifications is growing dramatically, especially in Asia. SCPro™ gives you the opportunity to achieve an industry-recognized certification. When you are SCPro™ certified, you prove to your current and future employers and the supply chain industry, that you possess comprehensive knowledge and are able to offer accurate analysis of real world supply chain challenges. When you’re SCPro™ certified, you’re more marketable!

SCPro™ Level One: Cornerstone of Supply Chain Management Workshop

Malaysia Institute for Supply Chain Innovation (MISI), in partnership with CSCMP, is offering a SCPro™ Level One: Cornerstone of Supply Chain Management workshop to prepare students for the first certification exam. Through this exclusive partnership with CSCMP, MISI is able to offer participants the advantage of being better prepared for the exam and also the opportunity to attain certification at a more competitive rate.

Workshop Duration

The workshop will be run for 5 non-consecutive days from 9:00 AM to 5:00 PM. The workshop will cover the concepts, processes and strategies pertaining to the 8 Learning Blocks of SCPro Level One with an examination review on the last day.

Eligibility

To be eligible to attend the workshop and sit for the certification exam, applicants must have either 4 years of relevant work experience OR a Bachelor’s degree.

SCPro™ Level One Learning Blocks

Supply Chain Concepts
This learning block is intended to provide insights into the key roles that supply chain management plays in improving customer service, reducing operating costs, and improving financial performance. In addition, supply chain management processes, strategies, tools, and technologies are introduced.

Demand Planning
The content of this learning block is intended to improve the participants’ knowledge of essential Sales and Operations Planning (S&OP), demand planning, and demand forecasting processes in the supply chain. For S&OP, the content focuses on the critical input to the S&OP process. For Demand Planning, the content focuses on the systems, models and approaches organizations use to better understand the demand for their products and services. For Demand Forecasting, the content focuses on the different approaches to forecast demand.

Procurement and Supply Management
This learning block is intended to enhance the participants’ knowledge of the management of supply processes and operations in the supply chain. The content focuses on the importance and leadership role of procurement within organizations, the basic steps and key success factors in the evaluation, selection and maintenance of supplier relationships, and the need for the procurement function to integrate with internal business functions and external supply chain partners in sourcing materials and services.

Manufacturing and Service Operations
The goal of this learning block is to enhance participants’ knowledge of the essential management of manufacturing and service operations in the supply chain. The content focuses on planning, organizing, controlling, and coordinating the order fulfillment and customer service operations in the supply chain. The participants will enhance their knowledge of the essential management of order fulfillment and customer service management of these distribution activities is vital to the fulfillment of customer demand and the ultimate success of a supply chain.

Inventory Management
The goal of this learning block is to enhance participants’ knowledge of the essential techniques and concepts for the management of inventory in the supply chain. The topics include the drivers of inventory, how the product’s value affects inventory decisions, the various approaches for determining inventory, how the number of inventory locations affects the level of inventory, and new approaches to reducing inventory including postponement, vendor-managed inventories, cross-docking, and quick response systems.

Warehousing
The goal of this learning block is to enhance participants’ knowledge of the management of warehouse processes and operations. The content focuses on the different types of warehousing options such as basic warehouse storage and handling operations, strategic planning issues, and the effects of warehousing design and service decisions on total logistics costs and customer service. Proper management of these distribution activities is vital to the fulfillment of customer demand and the ultimate success of a supply chain.

Order Fulfillment and Customer Service
In this learning block the participants will enhance their knowledge of the essential management of order fulfillment and customer service processes in customer relationship management. The content focuses on planning, organizing, controlling, and coordinating the order fulfillment and customer service operations activities from the initial customer inquiry all the way through post sales service.

Facilitators

Dr. David Gonsalvez
David Gonsalvez is the CEO & Rector at MIT Global SCALE Network’s Malaysian Institute of Supply Chain Innovation. He was formerly the Director of Global Supply Chain Strategy, at General Motors, responsible for supply chain strategy, planning, and security in GM’s supply chains worldwide.

Dr. Ioannis N. Lagoudis
Dr. Ioannis N. Lagoudis is Assistant Professor specializing in transportation logistics and supply chain management at MIT Global SCALE Network. He has worked as a consultant and specializes in Shipping Management and Intermodal Logistics.

Dr. Shardul Phadnis
Dr. Shardul Phadnis is Assistant Professor at MIT Global SCALE Network. His area of expertise includes scenario planning and supply chain strategy. He has worked in the manufacturing industry for seven years in Lean/Continuous Improvement functions.

Dr. Albert Tan
Dr. Albert Tan is Associate Professor at MIT Global SCALE Network. He has worked with government agencies in Singapore for the upgrading of IT capabilities for manufacturing and logistics industries. He has vast experience in ERP systems and Process Reengineering.

About MISI
The Malaysia Institute for Supply Chain Innovation (MISI) was jointly launched by Massachusetts Institute of Technology’s Center for Transportation & Logistics and the Government of Malaysia in 2011. MISI is a member of the MIT Global SCALE Network. MISI’s focus is in education, research, and corporate outreach activities in supply chain management and logistics.

MIT Global SCALE Network
The MIT Global SCALE (Supply Chain and Logistics Excellence) Network is an international alliance of leading research and education centers dedicated to the development of supply chain and logistics excellence through innovation. It spans North America, Latin America, Europe and Asia.
